Dear Hiring Team,

I am writing to express my interest in the Junior Software Engineer, Python position at Telnyx. I am a software engineer with experience building backend applications and APIs, and I am highly motivated to continue growing within a strong engineering team focused on scalable and reliable systems.

My experience includes working with backend technologies such as Python, Node.js, C#, .NET, SQL, and RESTful APIs. I have worked on projects involving microservices, relational databases, Docker-based environments, and cloud platforms, while also gaining experience troubleshooting applications, analyzing logs, and improving system reliability and performance. I enjoy building clean, maintainable solutions and adapting quickly to new technologies and engineering practices.

I am particularly interested in Telnyx because of its focus on global connectivity, high-performance infrastructure, and modern engineering culture. The opportunity to contribute to production-grade backend services, automation systems, and AI-powered tools strongly aligns with my interests in backend development, distributed systems, and scalable architectures.

I am comfortable collaborating with teams, learning from experienced engineers, and taking ownership of technical challenges. I value thoughtful engineering, continuous improvement, and writing reliable code that can scale in fast-paced environments. I am also eager to deepen my knowledge of asynchronous programming, observability, event-driven systems, and cloud-native technologies.

Telnyx's vision of building borderless connectivity and developer-focused infrastructure is extremely inspiring to me, and I would be excited to contribute while continuing to grow as an engineer within your team.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how my skills and motivation can contribute to Telnyx.

Sincerely,
Flavio Luis Fusi Escalante
